## AMENDMENT TO THE CLAIMS

- 1. A slider, comprising:
  - a body with a width of 1.0mm or smaller and a length greater than 0.85mm; and an air-bearing surface to allow the slider to glide above a moving data storage medium.
- 2. The slider of claim 1, wherein the body has a thickness of 0.23 mm or smaller.
- 3. The slider of claim 1, wherein the length of the body is 1.235 mm and the width of the body is 0.7mm.
- 4. The slider of claim 1, wherein the length of the body is 3.0 mm or smaller.
- 5. The slider of claim 1, further comprising a U-shaped rail extending from the air-bearing surface proximately located to a leading edge of the air-bearing surface.
- 6. The slider of claim 5, wherein the U-shaped rail has two surfaces at differing heights, each surface parallel to the air-bearing surface.
- 7. The slider of claim 1, further comprising a main compression pad extending from the air-bearing surface proximately located to a trailing edge of the air-bearing surface.

Application No.: 10/823,930

Reply to Restriction Requirement dated: September 6, 2006

8. The slider of claim 7, wherein the main compression pad has two surfaces at differing heights, each surface parallel to the air-bearing surface; and

further comprising two outlying compression pads straddling the main compression pad, wherein each compression pad is on a same level as one of the surfaces of the main compression pad.

9. A disk drive, comprising:

a data storage disk;

a slider with a width of 1.0mm or smaller, a length greater than 0.85mm, and an airbearing surface to allow the slider to glide above the data storage disk when moving; and a head gimbal assembly to suspend the slider above the data storage medium.

- 10. The disk drive of claim 9, wherein the slider has a thickness of 0.23 mm or smaller.
- 11. The disk drive of claim 9, wherein the length of the slider is 1.235 mm and the width of the slider is 0.7mm.
- 12. The disk drive of claim 9, wherein the length of the slider is 3.0 mm or smaller.
- 13. The disk drive of claim 9, further comprising a U-shaped rail extending from the air-bearing surface proximately located to a leading edge of the air-bearing surface.

14. The disk drive of claim 13, wherein the U-shaped rail has two surfaces at differing heights, each surface parallel to the air-bearing surface.

- 15. The disk drive of claim 9, further comprising a main compression pad extending from the air-bearing surface proximately located to a trailing edge of the air-bearing surface.
- 16. The disk drive of claim 15, wherein the main compression pad has two surfaces at differing heights, each surface parallel to the air-bearing surface; and further comprising two outlying compression pads straddling the main compression pad, wherein each compression pad is on a same level as one of the surfaces of the main compression pad.
